ITIL Service Management

Meet the expert: Jon Buck is an IT Professional specializing in infrastructure knowledge and learning. He has worked for several large scale IT organizations at various levels. Jon has a background in technical writing, instructional design, portfolio management, and UX/UI design.

Prerequisites: This course is designed for anybody looking to improve their IT processes and organization. They should have knowledge of what IT does and who are their customers.

Runtime: 27:51

Course description: ITIL stands for Information Technology Infrastructure Library and it is a service management strategy that gets everyone in your organization on the same page regarding the services you provide. ITIL provides you with frameworks, processes, and best practices about how IT goes about delivering services to their customers. Organizations that have implemented ITIL have seen increased revenue, lower operational costs, great system reliability, and happier customers. ITIL benefits all layers of the organization from leaders to IT teams all the way to impacting internal and external customers.
