

.NET Remoting Using Visual Basic 2005

page 1

Meet the expert: Barry Solomon has over 23 years of experience as a consultant. He has developed with Fortran, C, C++, Visual Basic, Java, and Visual C#. His extensive database experience includes working with Microsoft Access, Microsoft SQL Server, MySQL, and Oracle. His expertise now includes working with big data, Hadoop in particular, and all of its attending ecosystems as the limitations have been exceeded in most modern database systems.

Prerequisites: This course assumes that students have some programming background and is appropriate for experienced application developers with more than three years of development and at minimum one year experience with .NET. Specific experience with Visual Studio 2005 or the .NET Framework is extremely useful. This course moves quickly through a broad range of advanced programming topics. Prior knowledge of distributed technologies such as DCOM or COM+ is useful.

Runtime: 09:22:03

Course description: Remoting allows programs and software components to interact across application domains, processes and machine boundaries. This course covers many aspects of .NET remoting in-depth. You will learn how the .NET remoting architecture provides a means of establishing and working with secure, distributed enterprise level applications. You will also build a solid foundation for the development of remoting, and gain an understanding of client- and server-activated objects.

Course outline:

Remoting Basics

- Introduction
- Overview: Remoting
- Remoting Basics
- Serialization
- Remoting Classes
- Activation Modes
- Object Lifetime
- Hosting
- Activation
- Channels
- Remote Objects/Hosts
- Demo: Remoting Object
- Summary

The Hosting Application

- Introduction
- Overview
- Programmatic Config
- User Config Files
- Demo: Prog Config
- Demo: User Config Files
- Debugging / Deployment
- Client Deployment
- SoapSuds
- Summary

Remoting and Serialization

- Introduction
- Version Tolerant
- Serialization Callbacks

- OptionalField
- Versioning Practices
- Demo: Serialization
- Summary

Formatters / Interfaces

- Introduction
- Formatters / Channels
- Customized Channels
- Sink Providers
- Marshal by Value
- Marshal by Reference
- Interface Usage
- Demo: Interface Usage
- Version Compatibility
- Interface Versioning
- Hosting App Settings
- Client App Settings
- Demo: Work w/Versions
- Summary

Generics

- Introduction
- Overview
- Demo: Set Up Interface
- Demo: Remoting Class
- Demo: Set Up Host
- Demo: Set Up Client
- Demo: Run Client App
- Summary

Async Operations

- Introduction

- Overview
- SoapSuds
- Delegates
- Polling
- BeginInvoke/EndInvoke
- Demo: Invoke/Delegates
- Demo: Delegates
- Callbacks
- Threads
- Demo: Callbacks
- Demo: Threads
- Summary

Events / One Way Methods

- Introduction
- Overview: Events
- Customized Remoting Events
- Events as Delegates
- Demo: Events
- Events in lieu of Delegates
- One-Way Method
- Demo: One-Way Method
- Summary

Lifetime Management/Leases

- Introduction
- Overview
- Initialize the Lifetime
- Leases
- Lease Properties
- Lease Methods

- Lease State
- LifetimeServices Object
- Leases/Remote Objects
- Lease Renewal Props
- Demo: Lease Renewal
- Summary

Lifetime Cycle / Sponsors

- Introduction
- Lease Managers
- Expiration Exceptions
- General Exceptions
- Remoting Exceptions
- Remote Object Life Cycle
- Lifetime Sponsors
- Sponsors
- Sponsor Lease Renewal
- Demo: Sponsors
- Summary

Message Queues

- Introduction
- Overview
- Create a Queue
- Demo: Check MSMQ
- Demo: Setup MSMQ
- Demo: Create a Queue
- Demo: Examine Queue
- Send Messages
- Transactions
- Demo: Send Messages

(Continued on page 2)

.NET Remoting Using Visual Basic 2005

page 2

- Summary

Objects/Service Components

- Introduction
- Objects
- Receive Messages
- Demo: Objects
- Demo: Receive Messages
- Demo: Generics
- MSMQ/Service Components
- Demo: Service Components
- Summary

Security/IIS Integration

- Introduction
- Overview
- Permissions
- Handle Perms in MMC
- Handle Perms in Code
- Encryption
- Message Enumeration
- Demo: Encryption
- Demo: Certificates
- Demo: Message Enumeration
- Improvements and Changes
- Triggers
- Demo: Triggers
- Demo: Integrate with IIS
- Demo: Rules
- Demo: New Rule
- Demo: View Rules
- Demo: View MSMQ
- Summary

Overview: Service Comp.

- Introduction
- Overview
- Using Service Components
- Demo: Set Up Components
- Demo: Set Up Strong Name
- Demo: Sign Project
- Demo: Register Component
- Demo: Start Component
- Demo: Component Props
- Summary

Attributes / Security

- Introduction
- Service Component Attribs
- JIT Activation
- Object Construction
- Object Pooling
- Private Components
- Queued Components
- Transactions
- Role-based Security
- Demo: Service Comp Attribs

- Summary

Interfaces / COM+

- Introduction
- Overview
- Consume Service Comp.
- Side-by-side Versioning
- Demo: Interfaces
- Demo: Put it All Together
- Summary

IIS Security

- Introduction
- Activation Agent
- Authentication
- IIS Integration
- Demo: Set Up IIS
- Demo: Create Web App
- Summary

Code Access Security (CAS)

- Introduction
- .NET 2.0 Security
- Code Access Security (CAS)
- CAS - Permissions
- CAS - Group Permissions
- CAS - Permissions Types
- CAS - Membership Conditions
- CAS - Built in Permission Sets
- Frmwk Configuration Tools
- Demo: Permission Sets
- Demo: Code Groups
- Summary

Programmatic Security

- Introduction
- Working with Code
- Declarative Security
- Role-based Security
- Encryption
- Security Libraries
- Demo: Security
- Demo: Role-based Security
- Demo: Encryption
- Run the Security App
- Summary
