

Objective-C for Designers, Part 5: Custom Classes

page 1

Meet the expert: Our Creative Design courses are presented by experts from Wiley Publishing. Wiley is a global provider of knowledge and knowledge-enabled services that improve outcomes in areas of research, professional practice, and education. They are the publisher of award-winning journals, encyclopedias, books, and online products and services.

Prerequisites: This course assumes some familiarity programming but not with Objective C. This course is part of 9 course learning series; Objective-C for Designers: Your First Program; Objective-C for Designers: Logic; Objective-C for Designers: Data Types & Loops; Objective-C for Designers: Decision Statements; Objective-C for Designers: Custom Classes; Objective-C for Designers: Inheritance & Polymorphism; Objective-C for Designers: Using Variables; Objective-C for Designers: Protocols & Preprocessor; and Objective-C for Designers: Objects & Memory Management. Please be sure to view the courses in order if you are new to the material.

Runtime: 56:32

Course description: Master Objective-C programming in this 9 part learning series, Objective-C is a general-purpose, object oriented programming language used by Apple to program their OS X and iOS operating systems. This introductory course for using Objective-C to program the Apple iOS starts with the fundamentals including using the terminal and an introduction to Xcode, variables and functions. From there, you'll learn Objective-C programming basics such as object-oriented concepts, creating multiple instances of a class, and how to work with data types and expressions. Find out how to program logic and decision statements, understand Polymorphism, and implement protocols and delegation.

Course outline:

Operators

- Introduction
- Conditional Operators
- Relational Operators
- Logic Operators
- Using Operators
- Summary

Custom Classes

- Introduction
- Introduction to Custom Classes
- Creating a Custom Class
- Creating Custom Classes Cont.
- Accepting Multiple Arguments
- Creating Multi-Param Classes
- Passing Objects as Arguments
- Creating Object Arguments
- Summary

Method Variables

- Introduction
- Using Local Variables
- Creating Local Variables
- Using Self
- Returning Objects from Methods
- Returning Objects
- Result Fraction
- Summary
