

Advanced.NET Framework 2.0 Using VB 2005: Part 1 of 1

page 1

Meet the expert: Don Kiely is a featured instructor on many of our SQL Server and Visual Studio courses. He is a nationally recognized author, instructor, and consultant specializing in Microsoft technologies. Don has many years of teaching experience, is the author or co-author of several programming books, and has spoken at many industry conferences and user groups. In addition, Don is a consultant for a variety of companies that develop distributed applications for public and private organizations.

Runtime: 11:43:55

Course description: In this volume, you will learn about implementing service processes and application domains in your .NET applications using the System and ServiceProcess namespaces. You will see how to take advantage of multi-threading to create fast and efficient processes through the Threading namespace. You will learn how to internationalize your .NET application by using the globalization classes. Enhance your user interface with the System.Drawing and System.Text namespaces.

Course outline:

Application Configuration

- Introduction
- .NET Configuration System
- Configuration API
- Config Files Security
- Standard Config Sections
- Demo: Application Settings
- Read AppSettings
- View Raw AppSettings XML
- Demo: Connection Strings
- Conn. Strings in web.config
- Read Connection Strings
- Retrieve all Conn. Strings
- Other Standard Sections
- Demo: Impersonate Setting
- Summary

Manipulate Config Files

- Introduction
- Demo: Write to AppSettings
- Add a Setting
- Remove a Setting
- Standard Config. Settings
- Toggle Debugging in Setting
- Read machine.config
- Read Root web.config
- Read App. web.config
- Config Files in WinForms
- Section Groups / Props.
- Read machineKey section

- Section Collections
- Read from Pages Section
- Enumerating Section Groups
- Summary

Custom Config Sections

- Introduction
- Create a Custom Section
- Write Section Handlers
- Declarative Section Handler
- Link Class in web.config
- Test Declarative Header
- Programmatic Section Handler
- Property Validators
- Test Programmatic Header
- More Complex Sect. Header
- View Class Code
- Summary

Custom Config Providers

- Introduction
- View SettingsProvider
- User vs App. Scope
- Use SettingsProvider
- userSettings Section
- SQL Settings Provider
- View AssemblyInfo
- GetPropertyValues Code
- GetValue Code
- SetPropertyValues Code
- Scope Support Functions
- Test the Provider

- Summary

Installation Components

- Introduction
- Overview
- Pre-Defined Components
- Create a Windows App
- Add an Installer
- View Installer Code
- Add Code to Form
- Create Deployment Project
- Build the App
- Test the App
- Summary

Custom Install Components

- Introduction
- Overview
- Create Install Comp.
- InstallHappened Event
- Database events Code
- Run Installation Code
- InstallUtil.exe Tool
- AssemblyInstaller Class
- View Installer Code
- Summary

Configuring Assemblies

- Introduction
- Specify Framework Version
- Specific Assembly Versions
- Concurrent Garbage Coll.
- Register Remote Objects
- .NET Configuration Tool

- Summary

Event Logs

- Introduction
- Overview: Tools
- WinForms Components
- Use an Event Log
- Security Note About Logs
- EventLog Class
- Create an Event Log
- Setup Form Code
- Create/Delete Logs Code
- Read From an Event Log
- Log Changed Code
- Get Log Entries Code
- Write to an Event Log
- WriteEvent Method
- Summary

Processes

- Introduction
- Run ProcessManager Demo
- List Running Processes
- List Process's Modules
- Retrieve Current Process
- Starting a New Process
- Summary

Application Performance

- Introduction
- Run Perf. Counter App
- Windows Perf. Tool
- Create Perf. Counters
- Using Perf. Counters

(Continued on page 2)

Advanced.NET Framework 2.0 Using VB 2005: Part 1 of 1

page 2

• Summary

Debugging

- Introduction
- Run Debugging Sample
- View Debug Sample Code
- Overview: Stack Trace
- Examine Stack Trace
- Stack Trace Code
- Debugger Attributes
- BrowsableViewAttribute
- DisplayAttribute
- HiddenAttribute
- StepThroughAttribute
- TypeProxyAttribute
- VisualizerAttribute
- View Text Visualizer
- Impl. Custom Visualizer
- Summary

Tracing

- Introduction
- Run Tracing Demo
- Trace Sources
- Trace Switches
- Trace Listeners
- Filtering Traces
- Configuring Traces
- Summary

Instrumenting

- Introduction
- The Debug Class
- Write Debug Information
- Debug Fail
- Assertions
- The Trace Class
- Debug vs Trace
- Trace Switching
- Correlating Traces
- Enable Debugging/Tracing
- Summary

Management

- Introduction
- WMI Object Browser
- Interesting WMI Classes
- Access Windows Resources
- Enum. Physical Drives
- Enum. Logical Disks
- Enum. Network Adapters
- Enum. System Processes
- Enum. Paused Services
- Summary

Events

- Introduction

- WMI Query
- Sample App. Code
- Synchronous WMI Events
- Asynchronous WMI Events
- Summary

Code Access Security

- Introduction
- Overview: CAS
- CAS: Evidence
- CAS: Security Policy
- CAS: Code Groups
- CAS: Permissions
- Sample Runtime Sec. Pol.
- CAS / Windows Security
- Configuring CAS
- Framework Config. Tool
- Default Permission Sets
- Create Permission Set
- Analyze Assemblies
- Reset All Sec. Pols.
- Summary

Assemblies

- Introduction
- Use CAS in Assemblies
- Testing CAS
- VS Project Sec. Settings
- Set Security on Assemblies
- Add RequestMinimum
- Add RequestOptional
- Add UIPermission
- Edit File/UI Permissions
- Add RequestRefuse
- Summary

Methods

- Introduction
- Use CAS with Methods
- Method Permission Requests
- Setup Method Example
- Declarative Demand
- Imperative Demand
- Declarative Demand Fail
- Imperative Demand Fail
- Declarative Link Demand
- Declarative Assert
- Imperative Assert
- Declarative Permit Only
- Imperative Permit Only
- Declarative Inheritance
- Analyze Permissions

- Safe Error Handling
- Custom Permission Sets
- Named Permission Sets
- Summary

Windows Identity

- Introduction
- Authentication
- .NET Role-Based Security
- IIdentity / IPrincipal
- Identities / Principals
- Windows Identity
- Use Windows Identity
- Windows Principal
- Use Windows Principal
- Group Membership
- Use Group Membership
- Impersonation
- Use Impersonation
- Create an IIS Directory
- Summary

Security Demands

- Introduction
- PrincipalPermission Class
- Declarative Demands
- Imperative Demands
- Generic/Custom Identities
- Generic Identities/Principals
- Use Generic Objects
- Custom Identities/Principals
- Summary

Windows Security

- Introduction
- DACLs / SACLs
- Effective Permissions
- Explore DACLs / SACLs
- Access Control
- Classes/Enumerations
- Access/Audit Rule Classes
- Summary

Access Audit Rules

- Introduction
- Run Access Control Demo
- View Access Control Code
- Retrieve Security Info
- Retrieve Access Rules
- Retrieve Audit Rules
- Get Rules for Directories
- Get Rules for Registry
- Change Access Rules
- Allowing Access

- Denying Access
- Removing Access
- Change Audit Rules
- AuditFlags.None value
- Summary

Low Level Security

- Introduction
- ACL / ACE Classes
- CommonSecurityDescriptor
- PropagationFlags Enums.
- Maintain Security Settings
- Ownership
- Securing New Objects
- Access Object Ownership
- Inheritance/Propagation
- SetAccessRuleProtection
- Summary

Cryptography

- Introduction
- Cryptography Overview
- Protection Issues
- Algorithms
- Block Padding
- Cryptography in .NET
- Hashing Data
- Hashing Algorithms
- Algorithm Characteristics
- .NET Framework Classes
- Cryptography Demo
- Hashing Code
- Hashing a File
- Message Integrity
- Compare Hash Codes
- CryptoConfig Object
- Key Hashing Algorithm
- Summary

Encryption

- Introduction
- Symmetric Key Encryption
- Algorithms
- Algorithm Characteristics
- Symmetric in .NET
- Symmetric Key Demo
- Symmetric Key Code
- Encrypt/Decrypt Data
- Random Number
- Asymmetric Key Encryption
- RSA
- Asymmetric in .NET

(Continued on page 3)

Advanced.NET Framework 2.0 Using VB 2005: Part 1 of 1

page 3

- Asymmetric Key Demo
- Asymmetric Key Code
- Summary

Digital Sigs and DPAPI

- Introduction
- Digital Signature Hierarchy
- Digital Signature Demo
- Digital Signature Code
- DSACryptoServiceProvider
- Data Protection API (DPAPI)
- The DPAPI Process
- Store Options
- ProtectedMemory Class
- ProtectedMemory Demo
- ProtectData Option
- Summary
