

RESTful Services, Part 2 of 5: Injection and Sub Resources

page 1

Meet the expert: John Kidd is a nationally recognized instructor and consultant who travels the country sharing his expertise in java enterprise, SCRUM, and big data and related technologies. John has over 20 years of teaching and project development experience including roles from developer to vice president of research and development. John is also a popular speaker at several conferences in both the U.S. and Europe.

Prerequisites: This course assumes that the users have experience coding with Java. You should have already viewed the "RESTful Services: Overview and JAX-RS" course before viewing this course.

Runtime: 01:20:54

Course description: Just like any modern framework running on a Java application server, JAX-RS defines a lifecycle for the resources that you create. In this course, you will learn about the JAX-RS lifecycles of Instance per request, as well as how singletons behave. Along with those topics we will also explore all of the elements that can be injected into a service to provide access to all the different parts of the HTTP request and response. Lastly, we will look at the power of sub resources.

Course outline:

Life Cycle

- Introduction
- Demo: Review & New Resource
- Demo: Singletons
- Demo: Singletons vs Inst./Req.
- Demo: Only two options
- Summary

Injection

- Introduction
- Demo: Context
- Demo: Uri Info
- Demo: Return to Singleton
- Demo: More Context (cont.)
- Summary

Sub Resources Continued

- Introduction
- Demo: Run the Code
- Demo: Delegation
- Demo: Reality
- Summary

Sub Resources

- Introduction
- Demo: Add Resource & Classes
- Demo: Sub Resources (cont.)
- Demo: The Resource
- Demo: How It Works (cont.)
- Summary
