

SharePoint 2013 Developer, Part 01 of 15: Components of a Site

page 1

Meet the expert: Tim McCarthy is a senior solutions architect with Perficient who designs and builds highly scalable, layered web, desktop, and mobile applications utilizing the latest Microsoft platforms and technologies.

Prerequisites: This course assumes that students have some Web development background and some experience using Visual Studio 2012.

Runtime: 01:28:48

Course description: Over the years SharePoint has grown tremendously into a rich development platform. In this course we will go over the basic building blocks of SharePoint web applications and how they are architected. We will be examining site collections, sites, lists and libraries, web part pages, and the overall web application architecture that SharePoint offers. After you have finished this course, you will have a basic understanding of the core SharePoint structures.

Course outline:

Development Platform
